DETAILED ACTION

This is a response to Applicant's Remarks filed on December 15, 2008.

Claims 1-3, 6-9, 11-14, 17-24, 26-29, and 32-36.

Response to Arguments

1. Applicant's arguments, see Remarks, filed December 15, 2008, with respect to claims 1, 14, 17, and 29 have been fully considered and are persuasive. The rejections of claims 1, 14, 17, and 29 have been withdrawn.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. J. Lavar Oldham on February 26, 2009. This amendment is necessitated to avoid improper antecedent basis issue, and also made consistent with the same limitations seen in claim 1.

The application has been amended as follows:

Claim 14 (Currently Amended). In a computerized network environment including two or more computer systems sending messages through a network communication protocol, a method of receiving secure messages using custom security tokens, the method comprising:

an act of at a receiving computer system identifying one or more security tokens in a received message, from a sending computer system, that has at least a portion that has been encrypted using the one or more security tokens, and a value type corresponding with each identified security token, wherein the identified value type is a custom program class that only the receiving computer

Art Unit: 2432

system and the sending computer system can access[[,]] ~~wherein the stored value type comprises a custom program class including a collection of executable instructions for data handling, including instructions that tell a computer system how to read data associated with a specific security token that was created using the value type;~~

an act of matching the identified corresponding value type to a stored value type for a stored security token that the receiving computer system can access,
wherein the stored value type comprises a custom program class including a collection of executable instructions for data handling, including instructions that tell a computer system how to read data associated with a specific security token that was created using the value type; and

an act of receiving data from the at least one identified security token into the stored value type that has been matched, wherein the raw data includes one or more of identification information, and a custom property; and

an act of decrypting an encrypted portion of the received message using the stored value type based at least in part on the raw data received from the at least one identified security token.

Allowable Subject Matter

1. Claims 1-3, 6-9, 11-14, 17-24, 26-29, and 32-36 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 is exemplary and the other claim embodiment also describe security tokens that are generated using value types that comprise custom program classes of executable instructions that tell a computer system how to read data associated with the token, and these tokens are serialized using a private key as these tokens are inserted in the message whose portions are to be encrypted using the token. Kent (1998), Fieres [US 6178504 B1], and de Jong [US 2004/0054628 A1] do not teach these limitations.

Art Unit: 2432

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
